

What happens to every call your agents make

Today nobody knows what is said on 2,600 calls a day. After this, you open one page every morning and you know exactly who worked, who did not, and who promised a buyer something he never delivered.

FIRST How an agent is scored

SHARE	WHAT IT MEASURES	WHY IT IS IN THERE
40 / 100	Results visits booked, visits that happened, plots sold	The biggest part, because selling is the job. But counted against the leads he was given , so a man handed easy leads cannot win by default.
25 / 100	How he sells listening, land papers, objections, language, next step	This is what you can teach . Results tell you who won; this tells you why — and lets you give it to the other 39.
20 / 100	Effort calls made, people reached, speed, nothing untouched	Stops a man sitting on good leads doing nothing. This is the part that protects your ₹20 lakh.
15 / 100	Reliability promises kept, form matches the recording	Said he would call at six and did not? Marked a buyer “not interested” when the recording says otherwise? Both show here.
Not a share	Honesty	It is a gate, not a percentage. One serious problem wipes out that day's bonus completely, whatever the other numbers say. Without this, the fastest route up a leaderboard is lying to buyers.

SECOND What the colours mean

- BLUE — information**
A fact the system now holds
- SAND — a person**
An agent or Ravi sir is involved
- GREEN — good news**
The score, the ranking, the training
- TEAL — the machine**
Happens on its own
- ORANGE DIAMOND — a question**
The answer decides what happens next
- RED — something is wrong**
You are told the same day

The chart reads straight down. It only splits in two places, and both come back together lower down. Every arrow says why the flow moves that way.

The next page is one tall sheet so every word stays readable. On screen, zoom in and scroll down through it.

SYSTEM 2 One call, from dialling to the bonus
