

LANDMARK PROPERTIES · YELAHANKA

How we build it, and what it really costs

Every part of this system is built from tools that already exist and already work. Nothing here needs inventing. This document shows exactly which tools, how they fit together, what the market would charge — and what we have brought the price down to.

₹3,95,000

What this costs
built the ordinary way

₹1,06,000

What it costs
after our cost-cutting

73%

Reduction, with no
loss of function

Prepared for **Ravi Kumar sir**

September 2026

All figures are for 20,000 leads a month — Landmark's current volume.

SYSTEM 1 — answers your buyers

Right now a man who enquires at 11 at night gets a call the next afternoon, if at all. By then he has spoken to four other builders.

System 1 replies to him on WhatsApp in under 60 seconds — at any hour — sends him the DC conversion and E-Khata papers, has a real conversation in his own language, finds out his budget and timing, books him a site visit, and hands him to your agent with everything already written down. If he goes quiet, it chases him automatically, six to eight times.

SYSTEM 2 — watches your calls

Right now you have no idea what is said on 2,600 calls a day.

System 2 records every call, turns it into writing, and reads it. Every morning at 9:15 you get one page: who worked, who did not, who promised a buyer something and never delivered it, and a fair ranking of all 40 agents — adjusted for the quality of leads each man was given.

Why System 1 comes first

- **System 1 earns money on its own.** Answering fast and chasing properly works whether or not anyone is watching the agents.
- **System 2 asks your 40 agents to change how they work** — install an app, be recorded, be ranked. That is a people problem, and it goes far better once they have already seen the first system feeding them better leads.
- **You keep control.** If System 1 does not produce results, System 2 never gets built and you have spent a fraction of the money.

PART 2 Nothing here needs inventing

Every single piece of this system is an existing product that thousands of companies already use every day. We are not building new technology. We are joining proven parts together and pointing them at your business.

WHAT WE NEED IT TO DO	THE ACTUAL PRODUCT WE USE	WHO ELSE USES IT
Send and receive WhatsApp automatically	WhatsApp Business Platform the official one, from Meta	Every bank, airline and delivery company that WhatsApps you
Hold a real conversation in Kannada, Telugu, Hindi, Tamil, English	Claude, by Anthropic	One of the three largest AI companies in the world
Turn Indian-language phone calls into writing	Sarvam AI an Indian company, built for Indian languages	Backed by the Government of India's AI mission
Record calls on agents' own phones	Callyzer and similar ₹175 per agent per month	Thousands of Indian sales teams already
Store every lead, message and call safely	PostgreSQL database on Supabase	The standard business database worldwide
The screens your team opens	Next.js	Netflix, TikTok, Nike, Walmart
Keeping the recordings	Cloudflare storage	Runs roughly a fifth of the internet

The honest summary

There is no research project here and no guesswork. Each of these products has a price list, a support team and a working API. **The work is joining them together correctly and building the rules that decide what happens when** — which is exactly what the two flowcharts describe.

How System 1 is put together

Six pieces. Each one does one job.

THE PIECE	WHAT IT ACTUALLY DOES
1 The Inbox	Collects leads from 99acres, MagicBricks, Housing, Facebook ads, your website and walk-ins into one place. Spots the same phone number arriving twice so two agents never ring the same man.
2 The Clock	Decides what may happen right now. Between 9:30 and 7 a phone call is fine. After 9 at night, only a message goes out and the call waits for 9:30 the next morning.
3 Meera	The AI that talks to the buyer on WhatsApp. Answers only from <i>your</i> project data — she cannot invent a price. Sends the approval papers. Finds out budget and timing naturally, never like a form.
4 The Reader	Reads the conversation and decides: hot, warm, cold, or not a buyer. Also spots when a site visit has been agreed and books it.
5 The Diary	Holds every future action with its exact time. "Ring him at 6:15 PM." "Chase on day 4." Nothing depends on a person remembering.
6 The Screens	Your agents' daily call list, each buyer's full history, and your own one-page morning view.

What happens in the first 60 seconds

TIME	WHAT HAPPENS
0 seconds	He fills the form on 99acres
3 seconds	His details reach our system
6 seconds	WhatsApp lands on his phone with the price and the approval documents
2 minutes	We check whether it reached him. If his number has no WhatsApp, he goes to the top of tomorrow's call list
10 minutes	If he has not replied and it is working hours, a call task appears on an agent's screen

PART 4 How System 2 is put together

Five pieces. This is the part that runs after System 1 is proven.

THE PIECE	WHAT IT ACTUALLY DOES
1 The Recorder	A small app on each agent's own Android phone. Records every call and uploads it automatically. No new phone system to buy — they keep using the phone in their pocket.
2 The Vault	Every recording kept safely. If a buyer ever complains, or one of your men is blamed for something he did not do, you have the truth.
3 The Typist	Turns the recording into writing — Kannada, Telugu, Hindi, Tamil, English, including when a man changes language mid-sentence. Marks who said what.
4 The Analyst	Reads it and pulls out: a three-line summary, what the buyer objected to and whether the agent answered it, what he promised and by when, whether he sent the land papers, and anything that should not have been said .
5 The Scoreboard	Scores each agent out of 100, ranks all 40, and sends your one-page summary at 9:15 every morning.

The one thing that makes the ranking fair

System 2 asks System 1: *how many hot, warm and cold leads did this man actually receive?*

Then it scores him **against the hand he was dealt**. A man given easy leads cannot win by default, and a man given hard ones is not punished. **This is only possible because the two systems are built together** — a bought-in tool cannot do it, because it cannot see your lead data.

One thing to test in ten minutes before we commit

Android has restricted call recording since 2019. Most Indian phones — Xiaomi, Samsung, Vivo, Oppo — still allow it. iPhones never do.

We test it on five of your agents' actual phones before you pay anything for System 2. If too many fail, we use a proper phone system instead and the cost rises to about ₹96,000 a month. Better to find that out in ten minutes than in month four.

What this normally costs

Before showing you our price, here is what the same result costs by every other route.

Option A — buy ready-made software

WHAT YOU WOULD BUY	WHAT IT GIVES YOU	PER MONTH
A real estate CRM Sell.Do, LeadRat, Buildesk	Lead tracking only. No AI conversations. Not built for plots.	₹50,000 – 1,50,000
A call monitoring tool Convin, Enthu.AI	Call scoring only. Knows nothing about your leads.	₹42,000 – 1,30,000
Both, rented forever	Two products that cannot talk to each other	₹92,000 – 2,80,000

Option B — hire more agents instead

You may well be thinking: *my 40 men already handle 20,000 leads*. Let us do that sum properly.

WHAT YOUR FLOOR CAN DO		WHAT 20,000 LEADS NEED	
One agent dials, in a full day	65 numbers	Tries needed to actually reach a man	6 to 8
40 agents, in one day	2,600	20,000 leads × 6 tries	1,20,000 dials
40 agents × 22 working days	57,200 dials	Your floor can make	57,200
		Short by	62,800 dials

The point most people miss

It is not that your 40 men cannot reach 20,000 people. It is that they can only try each man about three times — and three is not enough.

The research on this is settled. The average salesman gives up after 1.3 tries. The ones who win make 6 to 8 tries in the first two days. A man who does not pick up is not a bad lead — he is driving, or in a meeting, or ignoring an unknown number.

To make 1,20,000 dials you would need about 84 agents — that is 44 more men

₹10,00,000 / month

₹1.2 crore a year, forever

System 1 closes the very same gap without hiring anybody. The first five or six tries are messages and automatic calls that cost paise. Your 40 men only pick up the phone once a buyer has already shown real interest — so their 57,200 dials go to people worth ringing.

Option C — build it, the ordinary way

This is what the system genuinely costs if you build it without thinking hard about every rupee.

WHAT IT PAYS FOR	PER MONTH
AI making phone calls to leads	₹1,20,000
A proper cloud phone system for 40 agents	₹65,000
Meera, on the most powerful AI available	₹54,000
Turning every single call into writing	₹45,000
WhatsApp message charges	₹40,000
The Reader, on the most powerful AI	₹23,000
Servers and database	₹22,000
The Writer, on the most powerful AI	₹16,000
Reading and scoring the calls	₹10,000
TOTAL, THE ORDINARY WAY	₹3,95,000

₹3,95,000 a month is not acceptable on top of the ₹20 lakh you already spend on leads. So we went through it line by line. That is the next page.

Put the three options side by side

Hire 44 more agents	₹10,00,000 / month
Build it the ordinary way	₹3,95,000 / month
Rent two ready-made tools that do less	₹92,000 – 2,80,000 / month
What we have brought it down to	₹1,06,000 / month

PART 6 What we brought it down to

Nine changes. Not one of them removes a feature you asked for.

WHAT IT PAYS FOR	WAS	NOW	HOW
AI making phone calls	₹1,20,000	₹0	Your own agents make the calls. The system just tells them exactly who to ring and when — which they cannot do today.
Phone system for 40 agents	₹65,000	₹7,000	A small app on the agents' own phones at ₹175 each, instead of buying a whole phone system.
Meera	₹54,000	₹23,000	A right-sized AI, and her instructions are stored once instead of re-sent with every message.
Calls turned into writing	₹45,000	₹25,000	Record 100%, read 36%. Every call is still kept and playable. We only read the calls on serious buyers plus a fair random sample.
WhatsApp charges	₹40,000	₹30,000	The first message is written to qualify for WhatsApp's cheap rate instead of the expensive one — 7 times cheaper per message.
The Reader	₹23,000	₹4,500	A smaller AI. It only pulls out facts — it does not need to hold a conversation.
Servers and database	₹22,000	₹8,000	Sized correctly for 20,000 leads a month, which is not a large amount of data.
The Writer	₹16,000	₹2,500	A smaller AI. Short messages only.
Reading and scoring calls	₹10,000	₹3,000	Runs overnight at half price , because your report is only needed by 9:15 AM.
Keeping the recordings	—	₹3,000	Storage for every call, kept for as long as the law requires.
TOTAL	₹3,95,000	₹1,06,000	73% less

What we gave up to get here — honestly

One thing only. Using the agents' own phones means the agent can still see the buyer's phone number. A full phone system would hide it, which stops a lead ever being passed to an outside broker.

That protection costs **₹58,000 a month**. It can be added any time you want it. Everything else on this page is pure engineering — same result, smaller bill.

What you would actually pay

STAGE	WHAT YOU GET	RUNNING COST	MY FEE	TOTAL / MONTH
Pilot 3 weeks, 1,000 of your leads	Proof, measured on your own numbers, against a matched group your team handles normally	₹8,000	one-time	₹8,000
Phase 1 System 1 live	Every lead answered in 60 seconds, sorted, chased, site visits booked	₹68,000	₹50,000	₹1,18,000
Phase 2 only if Phase 1 works	Every call recorded, read, scored and ranked	+₹38,000	+₹25,000	₹1,81,000

Put next to what you already spend

You spend around **₹20 lakh a month** on leads. Across 22 working days, that is about **₹90,000 every single day**.

System 1, complete and running, costs **₹1,18,000 a month** — a little over **one day** of what you already spend, to make sure the other twenty-one days actually get answered.

And what it has to earn

Cost of System 1 for a full year	₹14,16,000
What one extra plot sold per month earns you in a year on a ₹30 lakh plot at a modest margin	₹54,00,000

The system has to find you one extra plot a month to be worth roughly four times what it costs.
Everything above one plot is profit.

PART 8 This is already being built

Not a plan on paper. Work has started, and these parts are finished and tested today.

ALREADY BUILT AND WORKING	WHAT IT MEANS
The complete database — 10 tables	Every lead, message, call attempt, task, site visit and chase is designed and created
Secure login	Your buyers' phone numbers are behind a password from day one, not added later
Lead intake with duplicate detection	The same man arriving from 99acres and MagicBricks is joined into one record
Indian phone number handling	+91 98765 43210, 09876543210 and 9876543210 are all recognised as the same man
The day / evening / night rules	The system already knows a call at 11 PM is not allowed and the message still is
26 automatic tests, all passing	Every one of the above is checked automatically every time anything changes

You can see it running on my laptop today — log in, add a lead, watch the duplicate get caught. That is the difference between a proposal and something being built.

What is left, and how long

STAGE	WHAT GETS BUILT	TIME
Done	Database, login, lead intake, phone handling, time rules	✓ complete
Next	The scheduling engine — how "call him at 6:15" actually happens	1 week
Then	WhatsApp connected — sending, receiving, delivery status	1 week
Then	Meera and The Reader — the conversation and the scoring	2 weeks
Then	The first-hour rules and the agents' call screens	2 weeks
Then	Site visits, reminders, and the six chase sequences	2 weeks
SYSTEM 1 LIVE		8 weeks

What I am asking for

A three-week paid pilot on 1,000 of your real leads

Give me 1,000 fresh leads. Your team works another 1,000 the normal way. At the end we compare one number — **site visits booked per 1,000 leads**.

You also get something you do not have today: your **true cost per plot sold**, your real contact rate, and how many of your leads are duplicates you are paying for twice.

₹75,000

The pilot

3 weeks

Start to answer

₹40,000

Your total risk
the rest is only paid if it beats your team

₹40,000 is **less than half a day** of what you currently spend on leads. If the pilot does not beat your own team, you have spent that and learned something useful about your funnel. If it does beat them, we both know it is worth continuing.

Why I am asking for a small first step

- ✓ **You have never worked with me before.** A pilot is how you find out cheaply.
- ✓ **Everything is in your name** — the WhatsApp account, the AI account, the servers. Your data stays yours, and you can take it anywhere.
- ✓ **The code sits where you can reach it** and every stage is documented before I invoice you.
- ✓ **You can stop after any stage.** Nothing here locks you in.

The four questions I need answered to finish the numbers

- Of 20,000 leads a month, how many actually get dialled even once?
- Do your leads arrive by **email**, or does someone log in to the portal to collect them?
- Do you get the buyer's **real phone number**, or a masked one you have to unlock?
- When does each of your portal contracts come up for renewal?
